

Elena Khlebnikova

Frontend Developer

👤 Profile

I am a front-end developer passionate about learning technologies and writing clean code.

My previous experience as a teacher helped me to build such soft skills as: working in a team, communication and problem-solving,

★ Projects

I have been building web-sites for one and a half year and it allowed me to gain skills in HTML, CSS, JavaScript and React.

These are the projects that I'm proud of the most:

- **MovieMash:** React web-application which allows users to view different movies, tv-shows, see their rating, production, cast, crew and popularity. It also allows users to view actors and producers' biography, filmography and their popularity.
- **Create Kitchen Form:** This form is a part of an application I've collaborated on which allows users to rent out their kitchens. This form allows users to include a wide variety of information to their kitchen's listing such as: description, location, photos, host's languages, rules and availability. It was built using Next.js v.13 and React hook Form.
- **UmVet:** React application which allows users to view UmVet vet clinic website, on which users can view doctors, make an appointment with them and leave feedback.
- **MeowFood:** React application which allows users to view a paginated list of meals, sort and filter. The application also allows to add and remove meals from the cart and recalculate the total price.

🎓 Education

Bachelor degree in teaching of foreign languages (German and English), Kaluga state university named after K.E. Tsiolkovski, Kaluga (Russia)

September 2016 — May 2021

Received scholarship for scientific achievements (I published a number of articles in my field and was a speaker on a number of conferences).
